

PROJECT NAME: Intermountain Healthcare -- Fluoroscopic Radiology Equipment for Utah Valley Regional Medical Center

RECIPIENT: Utah Valley Regional Medical Center

LOCATION: Provo, Utah

PURPOSE: Fluoroscopic radiography enables radiologic practitioners to see vital organs and physiologic systems within the human body in real time for both diagnostic and therapeutic purposes. The fluoroscopy machine currently in use at Utah Valley Regional Medical Center has reached the end of its useful and serviceable life. This system was purchased by the hospital and installed in September of 1995 and desperately needs to be replaced to provide state of the art, reliable, safe imaging services to patients within the region. The funding would be used to replace this system.

AMOUNT: \$500,000
